Mounting details
Refer to drill table hole
pitches

Options: Various dimensions of the main profile, slide lengths, extensions, drillings and hole centres to customer requirements

We recommend use the major axis, do not dismantle the slide! The maximum safe load is given for a fully extended pair of slides, mounted on the major axis, with a load spread uniformly along the inner beam. **Material:** Our slides are processed with milling, from cold drawn material in quality C45 in accordance with EN10277. Standard ball cages are manufactured from Stainless Steel. Standard balls used are Stainless Steel, all grade 304.
